Activity in psychotherapy

He has worked with people aged from ten years to older age. He approached every man in a special way according to his/her personality. He perceived problem in a relation to the specific circumstances in which it developed, as well as with regard to the internal capacities for change. His clients had solved through psychoanalysis or psychotherapy problems with fears, anxieties, conflicts in partner relationships or at work, overeating (vomiting), loneliness, upbringing of children, giving meaning to the life, liberating themselves from family and generational trauma, learning, career choice, and so on.

Scientific interest

He deals with the assessment of suitability for psychoanalysis, assessment of termination of the psychoanalysis, mentoring, career development, healing aspects of personality, dark side of personality, research current problems of young people in society, research the family dynamics and the special relationship between parents and children.
